SUMMARY

Passionate about designing automated data pipelines and optimizing system performance to deliver actionable business insights. Highly value system stability and reliability through meticulous debugging. Currently expanding expertise into developing AI Agents (RAG & LLM) to stay ahead of the curve, with the goal of building comprehensive and intelligent end-to-end data systems.

SKILLS

Programming: Python, SQL

Databases: PostgreSQL, SQL Server, SQLite, BigQuery

Frameworks & Tools: Django, Selenium, GCP

Data Visualization: Tableau, Power BI, Looker Studio, D3.js

EDUCATION 2022-2026

Data Science & Business Analytics Student | Da Nang University of Economics

Graduated with Highest Honors GPA 3,83/4.0

3rd Prize — Faculty-level Student Research Award (2024-2025, 2025-2026)

CERTIFICATES

TOEIC

650/990

WORK EXPERIENCE

Data Analytics Engineer (Fresher) [The ALAB Technology](#)

11/2024 - 05/2026

Project: AI Travel Chatbot — End-to-End Data Pipeline & Multi-Agent LLM

09/2025 - 03/2026

- Built a multi-source data ingestion pipeline collecting from 3 OTA platforms via Selenium.
- Built data transformation & embedding pipeline: schema standardization, missing value handling, Regex type casting; encoded via Gemini API and stored in Vector Database for RAG retrieval.
- Built Multi-Agent architecture with 3 specialized agents orchestrated via LLM + RAG; integrated Google OR-Tools to solve VRPTW for real-world time-window route optimization.

Project: Automated Audiobook Production Pipeline

01/2026 - 04/2026

- Built distributed data ingestion architecture running in parallel across multiple workstations; achieved ~2,387 records/day (~4 novel series).
- Built LLM-based transformation layer: Prompt Engineering (Few-shot + Chain-of-Thought) via Gemini API for accurate character segmentation; achieved ~2,071 records/day.
- Built zero-cost image generation module via RPA Selenium controlling Gemini Web — achieved 125 images/day, saving 100% of API costs.

Project: Automated AI Video Production Pipeline — Fashion Brand

06/2025 - 08/2025

- Built end-to-end media automation pipeline: input routing by task type, triggered KLING AI render, auto-download — eliminating all manual operations.
- Built resource management layer: credit balance tracking — pipeline runs 24/7 without supervision.
- Integrated self-healing mechanism for Symphony post-production.

Data Analytics Engineer (Fresher) [The ALAB Technology](#)

05/2024 - 11/2024

Project: Analytics Ecosystem — Tea Retail Store (SQL · BI · WebApp)

- Wrote multi-CTE SQL queries in BigQuery to analyzing sell-through probability by category, answering specific business questions on product categories.
- Designed 4 dynamic dashboards on Tableau, Power BI, and Looker Studio; analyzed product performance and customer segmentation.
- Built WebApp: users interact directly with data on the web instead of viewing static reports.
