SUMMARY

Passionate about building automated data pipelines and optimizing systems to solve practical business challenges. Strong problem-solver with a patient approach to debugging and continuous performance enhancement. Currently expanding expertise in AI Agents (RAG & LLM) to stay ahead of the curve, driven by the goal of creating intelligent, end-to-end data ecosystems.

SKILLS

Programming: Python, SQL

Databases: PostgreSQL, SQL Server, BigQuery

Frameworks & Tools: Django, Selenium, GCP

Data Visualization: Tableau, Power BI, Looker Studio, D3.js

EDUCATION 2022-2026

Data Science & Business Analytics Student | Da Nang University of Economics

Graduated with Highest Honors GPA 3.83/4.0

3rd Prize — Faculty-level Student Research Award (2024-2026)

LANGUAGES

TOEIC

650/990

WORK EXPERIENCE 2024-2026

Data Analytics Engineer (Junior) The ALAB Technology

01/2026 - Now

Project: Smart Travel Assistant Application - TravelAI

- Developed **Multi-Agent** architecture (3 independent agents) on **Django**, integrating Google **OR-Tools** for real-time itinerary optimization.

Data Analytics Engineer (Fresher) The ALAB Technology

10/2024 - 12/2025

Project: Smart Travel Assistant Application - TravelAI

- Deployed **ETL** pipeline (**Python, Selenium, Regex**) to scrape and standardize data from 3 OTAs into PostgreSQL.
- Built **vector embedding** layer (Gemini API) and managed **Vector DB** for chatbot **RAG** retrieval.

Project: Automated Audiobook Production System

- Deployed automatic distributed data crawler (**Python, GG Sheets**) running in parallel across multiple machines.
- Applied **Prompt Engineering** (Few-shot + Chain-of-Thought) via **Gemini API** for automatic accurate character role assignment. Performed data cleaning and preprocessing before feeding inputs into the F5-TTS model.
- Developed automation module (**Python, Selenium**) controlling Gemini Web to generate illustrations.

Project: AI-Driven Video Production Automation System for Men's Fashion Brands

- Automated the entire media production **pipeline**, driving everything from task routing to AI video generation via **Selenium** and **KLING AI**. By seamlessly syncing post-production with **Symphony**, this initiative successfully slashed media expenses by 70-80%.
- Built a **Python** module to autonomously monitor API credit balances, ensuring the system runs 24/7 without interruption.

Data Analytics Engineer (Intern) The ALAB Technology

04/2024 - 09/2024

Project: Tea Business Data Analytics and Visualization System

- Analyzed business performance using advanced **SQL** (multiple CTEs) on **BigQuery** and built cross-platform dashboards (**Tableau, Power BI, Looker Studio**).
- Developed interactive reports using **Python/Streamlit** and automated data synchronization workflows via Google Sheets.

Project: Real Estate Tracking and Valuation System

- Built data collection and preprocessing pipelines, utilizing **Pandas** and **NumPy** for data cleaning and preparation.
- Extracted features from multimodal data (**NLP** for text, **Computer Vision** for images) to feed into a Machine Learning model for house price prediction.
