SUMMARY

Passionate about building automated data pipelines and optimizing systems to solve practical business challenges. Strong problem-solver with a patient approach to debugging and continuous performance enhancement. Currently expanding expertise in AI Agents (RAG & LLM) to stay ahead of the curve, driven by the goal of creating intelligent, end-to-end data ecosystems.

SKILLS

Programming: Python, SQL

Databases: PostgreSQL, SQL Server, BigQuery

Frameworks & Tools: Django, Selenium, GCP

Data Visualization: Tableau, Power BI, Looker Studio, D3.js

EDUCATION 2022-2026

Data Science & Business Analytics Student | Da Nang University of Economics

Graduated with Highest Honors GPA 3.83/4.0

3rd Prize — Faculty-level Student Research Award (2024-2026)

LANGUAGES

TOEIC

650/990

WORK EXPERIENCE 2024-2026

Data Analytics Engineer (Junior) The ALAB Technology

01/2026 - Now

Project: GenAI Automated Audiobook Production System - OmniNarrator AI

- Built distributed data scraping (**Python, GG Sheets**) and automated illustration generation (**Selenium, Gemini**).
- Preprocessed data and applied Prompt Engineering via **Gemini API** for character role-mapping in F5-TTS.

Project: Smart Travel Assistant App - TravelAI

- Developed a **Multi-Agent Django** architecture with **Google OR-Tools** to optimize real-time schedules, auto-generating timelines, maps, and cost estimates.

Data Analytics Engineer (Fresher) The ALAB Technology

10/2024 - 12/2025

Project: Smart Travel Assistant App - TravelAI

- Deployed an **ETL** pipeline (**Python, Selenium, Regex**) to scrape, process, and standardize 3-OTA data into **PostgreSQL**.
- Built **vector embeddings (Gemini API)** and managed Vector DB for chatbot **RAG** context retrieval.

Project: Business Reporting Chatbot for a Men's fashion brand

- Built a **RAG** pipeline using **Python (Pandas, NumPy)** to process data as inputs for **Gemini API** Prompt Engineering to auto-detect and highlight core revenue/cost fluctuations.

Project: AI-Driven Video Production Automation System for Men's Fashion Brands

- Automated end-to-end** media production from task classification via **Selenium**, from **KLING AI** generation to **Symphony** post-sync, cutting costs by 70-80%.
- Built a **Python** module to monitor and manage credit balances, ensuring 24/7 pipeline operation.

Project: Real Estate Tracking & Valuation System - RealBuddy AI

- Applied **Gemini API** to extract features from unstructured real estate data.
- Built interactive **dashboard (React, D3.js)** to visualize market trends and analyze fluctuations.

Data Analytics Engineer (Intern) The ALAB Technology

04/2024 - 09/2024

Project: Real Estate Tracking & Valuation System - RealBuddy AI

- Preprocessed data (**Pandas, NumPy**) and extracted multimodal features via **Word2Vec** (text) and **Inception-v3** (images) to train an **SVM** house price prediction model.

Project: Business Data Analytics & Visualization System for Mộc Thảo Trà Online Shop

- Analyzed performance via SQL on BigQuery and built Tableau, Power BI, and Looker Studio dashboards.
- Developed interactive Python/Streamlit reports and automated data sync via Google Sheets.
