SUMMARY

Passionate about building automated data pipelines and optimizing systems to solve practical business challenges. Strong problem-solver with a patient approach to debugging and continuous performance enhancement. Currently expanding expertise in AI Agents (RAG & LLM) to stay ahead of the curve, driven by the goal of creating intelligent, end-to-end data ecosystems.

SKILLS

Programming: Python, SQL

Databases: PostgreSQL, SQL Server, BigQuery

Frameworks & Tools: Django, Selenium, GCP

Data Visualization: Tableau, Power BI, Looker Studio, D3.js

EDUCATION 2022-2026

Data Science & Business Analytics Student | Da Nang University of Economics

Graduated with Highest Honors GPA 3,83/4.0

3rd Prize — Faculty-level Student Research Award (2024-2026)

CERTIFICATES

TOEIC

650/990

WORK EXPERIENCE 2024-2026

Data Analytics Engineer (Junior) [The ALAB Technology](#)

01/2026 - Now

Team Project: AI Travel Chatbot - **Role:** End-to-End Data Pipeline & Multi-Agent LLM

10/2025 – 04/2026

- Deployed **ETL** pipeline (**Python, Selenium, Regex**) to scrape and standardize data from 3 OTAs into PostgreSQL. **Result:** Cleaned and ingested >4,100 records (hotels, destinations).
- Built **vector embedding** layer (Gemini API) and managed **Vector DB** for chatbot **RAG** retrieval. **Result:** Optimized retrieval accuracy by encoding specialized contexts.
- Developed **Multi-Agent** architecture (3 independent agents) on **Django**, integrating Google **OR-Tools** for real-time itinerary optimization. **Result:** Auto-generated timelines, polyline maps, and budget.

Data Analytics Engineer (Fresher) [The ALAB Technology](#)

10/2024 - 12/2025

Team Project: Pipeline Production Audiobook - **Role:** Data Crawling, LLM Processing & RPA.

04/2025 – 08/2025

- Deployed automatic distributed data crawler (**Python, Google Sheets**) running in parallel across multiple machines. **Result:** Stably collected ~2,387 records/day.
- Applied **Prompt Engineering** (Few-shot + Chain-of-Thought) via **Gemini API** for automatic accurate character role assignment. **Result:** Accurately processed ~2,071 records/day.
- Developed automation module (**Python, Selenium**) controlling Gemini Web to generate illustrations. **Result:** Achieved 125 images/day, saving API costs.

Team Project: Pipeline Sản Xuất Video AI (Thương Hiệu Thời Trang) - **Role:** Automation Pipeline

11/2024 – 02/2025

- Deployed task classification flow, using **Selenium** to control **KLING AI** for video generation. **Result:** Eliminated 100% manual operations in media production.
- Built **Python** module to automatically monitor and manage credit balance. **Result:** Ensured 24/7 pipeline operation without human supervision.
- Synchronized post-processing flow with Symphony system. **Result:** Stably deployed and operated in partner's environment.

Data Analytics Engineer (Intern) [The ALAB Technology](#)

04/2024 - 09/2024

Personal project: Analytics Ecosystem — Tea Retail Store - **Role:** End-to-End Analyst

- Wrote advanced **SQL queries** (multi-CTE) on **BigQuery** to accurately evaluate the performance of 5 product categories.
- Designed dynamic dashboards on **Tableau, Power BI**, and **Looker Studio** for comprehensive data analysis.
- Built interactive data visualization apps using **Python** and **Streamlit**, establishing automated data synchronization via **Google Sheets**.
